Ascend

TCC

Helping children reach their potential.

Ascend provides a comprehensive Early Childhood Integrated Data Solution to help you manage your State's system of early childhood programming and better inform your daily decisions about the children, programs and workforce that you are dedicated to serving.

At TCC,we believe in the power of people and the impact technology can have on outcomes. Our team has over four centuries of collective experience in early chodhood data systems. And, while TCC is a fast-growing company, we maintain a small business mentality by listening to our customers, delivering innovative solutions, and solving critical business challenges. When you work with us, you can count on a quick response from professionals you trust.

Ascend Features

- Compatible with modern browsers and internet enabled devices
- Workflow management tools
- Dropdown list manager
- Correspondence management tools
- User friendly online application wizards
- Individualized dashboard alerts
- 508 compliant
- User role-based security
- User profile and account management
- E-document upload and file cabinet storage
- Language translation tools
- Canned and ad hoc reporting
- Robust search features

Ascend System Modules:

Licensing Management Module

Manages all functions of the early childhood program licensing including online applications, background checks, inspections, technical assistance activity, personnel and classroom assignments, complaints, enforcements, and appeals. Role-based user access supports workflow management, alerts, and customizable correspondence templates. An integrated map feature allows families to search for care that meets their needs.

Professional Development Registry (PDR) Module

Collects and tracks training, education and employment history of early childhood caregivers. Caregivers can search, register and track participation in state-approved trainings and professional development activities. State-approved trainers and organizations can manage offerings and issue training completion certificates. Role-based user access supports workflow management, alerts, and customizable correspondence templates.

Child/Family Eligibility and Case Management Module

Manages eligibility determination and enrollment of children in state-approved early childhood programs. Calculates eligibility authorization according to state business rules and applicable market rates. Tracks child attendance by classroom and includes wait list management functionality. Budget management and allocation tools. Can track state-issued payments by provider and by family. Role-based user access supports workflow management, alerts, and customizable correspondence templates.

Quality Rating & Improvement System (QRIS) Module

Manages all functions of a state QRIS, including online applications, TA/coaching participation, continuous quality improvement plans, rating requests, and rating visits. Role-based user access supports workflow management, alerts, and customizable correspondence templates.

eXpedite Mobile Inspection Add-on Service

Turn any state form into an electronic form that field workers can use to collect data. An offline option allows workers to collect and save data when no internet connection is available. Once an internet connection is obtained, workers perform a "sync" to send all data directly to the back-end system. Captures electronic signatures and converts handwriting to text.

Integrated Learning Management System (LMS)

The Integrated LMS provides a portal from which learners can access instructor-led training, self-paced e-learning and virtual classroom sessions for engaging blended learning. With the LMS, you can upload e-learning content such as SCORM packages, PDFs, videos and question banks quickly and easily.

Data Analytics Add-on Service

Data analytics give states the ability to tell a powerful story about their early childhood programs, workforce, families and children. Ascend is compatible with multiple data analytics tools and our experts can provide expert guidance and support to state policy makers.

Founded in 1996, TCC is commited to delivering high-valuie, cost-effective IT consulting servcies and technology solutions to businesses and government agencies. With a team of more than 200 professionals, we serve clients nationwide. Our innovative solutions deliver real-world results and have made us a leading services and solutions provider.

The Solution You Need

Effective. Usable. Field-friendly.

Out of office shouldn't mean out of touch.

Why You Need **eXpedite™**

Decrease costs by eliminating duplicate data entry and paper form storage, by easily pushing out and ensuring the use of the most recent, standardized, electronic forms.

Increase efficiencies through consistent and accurate data collection, immediate access to quality, actionable data and by keeping the field in the field, working.

Decrease Costs

- *Eliminate Paper*
- *Eliminate Storage Costs*
- *Decrease field time returning to the office*

Increase Efficiency and Speed

- *Streamline processes*
- *Increase productivity*
- *Eliminate redundant manual processes*

Utilize Actionable Data

- *Access data quickly*
- *Eliminate stacks of outdated paper forms*
- *Take immediate action on accurate data*

Increase Accuracy

- *Standardize collection of data*
- *Eliminate inaccurate data and errors*
- *Improve data consistency through form controls*

Improve Field Service Quality

- *Increase data quality*
- *Access historical data while in the field*
- *Decrease duplicate data entry with pre-filled forms*

Solution Overview

The **eXpedite**™ solution digitizes your forms and enables your mobile field workforce to work anywhere. The goal is to decrease costs and increase productivity in the office or in the field. To ensure your success, the **eXpedite**™ solution is comprised of three integral parts: **eXpedite**™ Software, Cloud Services and Success Services.

eXpedite™ Software

eXpedite Manager™ enables you to design and manage simple, intuitive forms with its point-and-click interface for collecting data in the field.

eXpedite Client™ allows you to manage assigned tasks, access historical data, and complete validated forms and processes on-the-go.

The eXpedite Connector™ is the link that connects the field to your data, and the data to your back-end systems.

Cloud Services

Our SaaS model, **eXpedite Cloud Services™**, offers an array of flexible options to manage your solution, streamline your operations, and minimize costs.

Success Services

eXpedite Success Services™ are a required component of each implementation and ensure your field and processes are as efficient and effective as possible.

SOFTWARE as a SERVICE

Early Childhood Solutions

Ascend + eXpedite Detailed Solution Overview

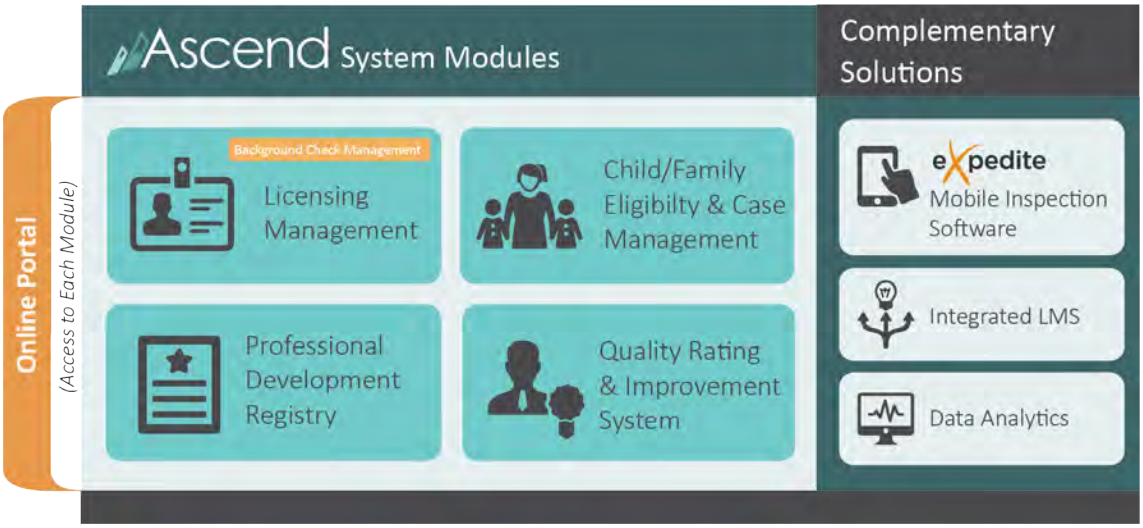

e-tcc.com 317.638.0173 Mike.Boyle@e-tcc.com 1022 East 52nd Street Indianapolis, IN 46205

Solution Overview

Ascend Early Childhood Integrated Data Solution

Ascend is comprised of several modules and can be easily integrated with other tools:

- Licensing Case Management
- Professional Development Registry (PDR)
- Quality Rating & Improvement Case Management (QRIS)
- Child/Family Eligibility and Case Management
- eXpedite (external tool developed by TCC)
- Learning Management Systems (LMS)
- Data Analytics (external tools)

ASCEND OVERALL FEATURES

- Compatible with modern browsers and internet enabled devices
- Workflow management tools
- Drop down list manager
- Correspondence management tools
- User friendly online application wizards
- Individualized dashboard alerts
- E-document upload and file cabinet storage
- User role-based security
- User profile and account management
- 508 Compliant
- Language translation tools
- Canned and ad hoc reporting
- Robust search features

Ascend Licensing Case Management Module

TCC developed our Licensing Case Management module to include the core functionality our subject matter experts know are needed to support common licensing functions, as well as with the flexibility for customization as we understand our clients will desire to address their unique policies and processes.

Ascend can maintain and track data on any type of provider in your organization - and it is designed to easily integrate with other systems to assure that your licensing staff have the most current information needed to conduct effective and efficient inspections.

The Licensing Case Management module manages all functions of the early childhood program licensing including online applications, background checks, inspections, complaints, enforcements and appeals. Role-based user access supports workflow management, alerts and customizable correspondence templates.

Below is a representation of the major business functions and features of our Ascend Licensing Case Management module.

ASCEND LICENSING CASE MANGEMENT
Functionality and Features

Online License Application

- Supports multiple online application types
- Online background check application
- Upload necessary documents

Inspections

- Integrated with TCC's Mobile Inspection Tool
- Track and display inspection results
- Manage corrective action plans

Facility Management

- Licensing status management
- Facility and classroom calendar
- Building and classroom details
- Record and track technical assistance

Personnel Management

- Staff association with provider
- Director role to view staff training and professional development activities

Negative Events and Actions

- Manage complaints
- Manage licensing enforcement actions
- Record and report serious injuries and deaths

Online Provider Search

- Easy to use provider search with GPS mapping
- Narrow search according to family needs

Ascend Professional Development Registry (PDR) Module

The Professional Development Registry (PDR) module collects and tracks the training, education and employment history of early childhood caregivers. Within the module, caregivers can search, register and track participation in state-approved trainings and professional development activities. State-approved trainers and organizations can manage offerings and issue training completion certificates. Role-based user access supports workflow management, alerts and customizable correspondence templates. Below is a representation of the major business functions and features of our Ascend Professional Development Registry (PDR) module.

ASCEND PROFESSIONAL DEVELOPMENT REGISTRY (PDR) Functionality and Features

Online Registration

- Individuals establish online profile with authenticated email
- User friendly profile management tools
- Facilitates easy upload of supporting documentation

Training, Education and Other Workforce Demographics

- Tracks health and safety trainings, as designated to meet 10 federal requirements
- Tracks all training education, certifications, employment, scholarships/ grants

Trainer Management

- Ensures state approved trainers have access to workforce
- Allows trainers to post trainings on calendar
- Supports roster management, including reminders and other notices to participants

Facility Director Function

- Directors can approve staff associated with their facility
- Directors can view staff training and PD history
- Directors can choose end date of terminated staff

Training Calendar and Online Registration

- Displays detailed information about training opportunities
- Supports online training registration and tracks participation
- Associates electronic certificate with individual's training record

Career Ladder Support

- Provides user friendly tools to assist individuals applying for career level
- Supports administrative review and approval of career level requests
- Tracks career level history

Ascend Quality Rating & Improvement System (QRIS) Module

The Quality Rating & Improvement System (QRIS) module manages many functions of a state QRIS, including online applications, TA/coaching participation, continuous quality improvement plans, and the ratings process. Role-based user access supports workflow management, alerts, and customizable correspondence templates.

Below is a representation of the major business functions and features of our Ascend Quality Rating & Improvement System (QRIS) module.

ASCEND QUALITY RATING AND IMPROVEMENT SYSTEM
Functionality and Features

Online Application

- Supports online application process for all program types
- User friendly tools to upload supporting documentation

Technical Assistance (TA) Management

- Assign and manage TA providers and caseloads
- Track TA history
- Assign tasks to TA provider

Quality Improvement Plans

- Develop and monitor detailed plans designed to improve quality of facility
- Track quality progress over time
- Assign tasks to provider and TA providers

Rating Process

- Trigger rating request
- Customizable ratings engine

Ascend Child/Family Eligibility and Case Management Module

The Child/Family Eligibility and Case Management module manages eligibility determination and enrollment of families and children in state-approved early childhood programs. It tracks family and child demographics and a history of state fiscal disbursements.

Below is a representation of the major business functions and features of our Ascend Child/Family Eligibility and Case Management module.

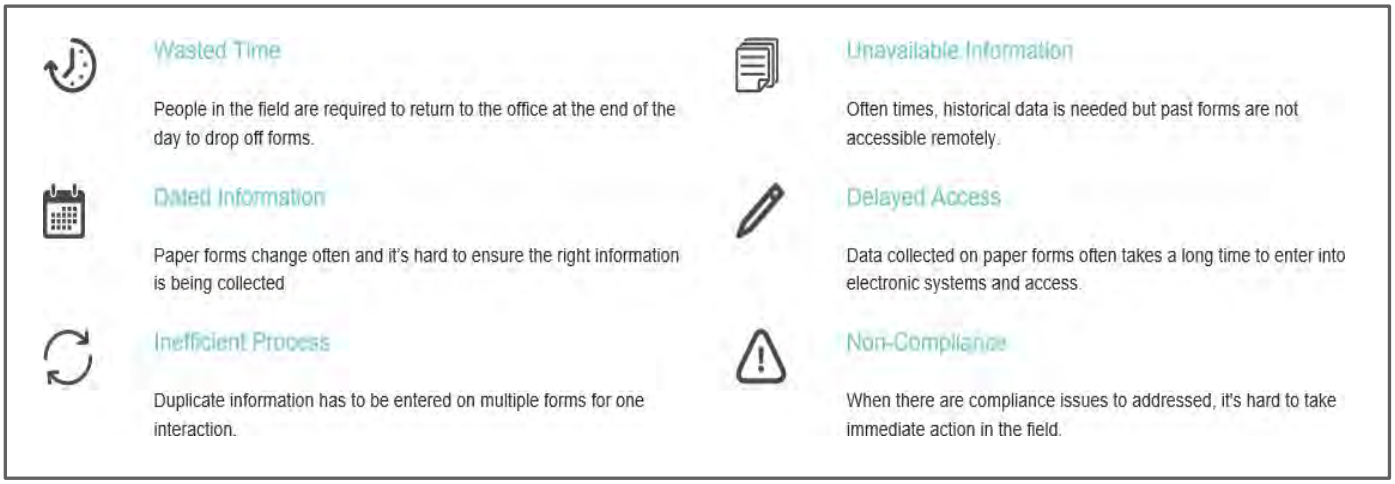

ASCEND CHILD/FAMILY ELIGIBILITY & CASE MANAGEMENT Functionality and Features

Online Family Application	Child Enrollment/Attendance	Fiscal Management
• Online family application and provider search • Calculates eligibility determination according to state business rules/policies	• Enrolls child with eligible program • Track attendance by child and classroom • Wait list functionality	• Allocates state funding according to state business rules • Tracks state issued payments by program and by family • Stores applicable market rates

eXpedite Mobile Inspection Add-on Service

The eXpedite Mobile Inspection Tool turns any state form into an electronic form that field workers can use to collect data. An offline option allows workers to collect and save data when no internet connection is available. Once an internet connection is established, workers perform a "sync" to send all data directly to the back-end system. eXpedite also captures electronic signatures and can convert handwriting to text.

A state licensing agency faces many challenges associated with manual paper-based processes:

With these challenges in mind, TCC collaborated with early childhood licensing experts to develop eXpedite, our electronic forms solution. Our solution replicates an exact copy of a state licensing agency's paper forms and translates them into smart forms that allow field staff to collect data in the field and upload into a pre-determined central repository.

Key Features

Form Design

Create and manage your custom digital forms using an intuitive, point-and-click interface

Form Completion

Complete forms and print reports anytime and anywhere

Version Control

Manage and access multiple version of any form, from any device

Publishing

Publish new forms to specific users so they stay in sync with the latest version.

Pictures

Take an attach relevant photos of evidence and significant details

Map Integration

Tag inspection locations, pictures, and videos utilizing geotagging.

Calendar

Organize your tasks and appointments and avoid potential conflicts.

Sign. Print. Share.

Validate forms with client signatures and instantly print from your tablet.

Key Benefits

To promote ease of use and minimize data entry errors, appropriate fields can be pre-populated. Drop downs, checkboxes, free-form textboxes, and electronic signatures are available for data input. Text boxes are used to enter words, numbers, or special characters. The onscreen keyboard can be used to type the data, or the pen can be used to write the data.

Various types of data may be collected with eXpedite including text, pictures, digital signatures, and notes, and transmitted to a server-based licensing management system. Inspectors may also choose to print and leave a signed copy of the inspection results with the provider; or use the option to create a PDF copy and immediately email the inspection results to the provider.

Child Care Virtual Appointment Application

e-tcc.com
317.638.0173
Mike.Boyle@e-tcc.com
1022 East 52nd Street
Indianapolis, IN 46205

Ascend Virtual App

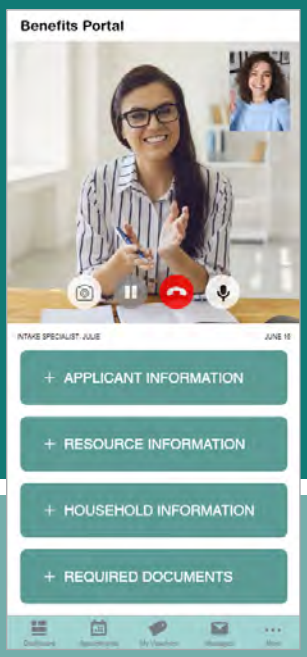

The Ascend App provides a virtual, user-friendly tool to promote family engagement & access to child care services.

Smartphones have surfaced as the most commonly used device for internet access. Families want to be able to conduct important business from their phones. The Ascend Virtual App gives families a way to submit applications for services, upload electronic documents, view and receive case status updates, schedule intake appointments and interact virtually with their intake case manager – all from their smartphone!

The Ascend Virtual App has many benefits to child care intake worker and case managers.

The Ascend App decreases the workload of intake workers and case managers and provides a virtual way to conduct family appointments. Less time is spent on administrative tasks like taking phone calls about case status and scheduling appointments. With Ascend, families can do this on their own! If desired, recordings of all virtual appointments can be made and saved if needed in the future for case review or appeal.

Virtual Appointments may be conducted on internet-enabled devices - desktops, laptops, tablets and smartphones.

The Ascend App can be used on most internet-enabled devices. Intake agents and families can join virtual meetings on whatever device works best for them.

To learn more about how Ascend's Virtual Appointment Mobile App can help expand the reach of your Early Childhood Program, contact Mike Boyle.

Our Child Welfare Solution in Maryland

~ 15 months
Kick off to Pilot-Launch

Lowest Risk
End-to-end automated workflows implemented in a secure environment

Iterative & Agile
Ease of change without undue cost or complexity

Mobility
Mobile friendly case management system provides instant access to family records

**CCWIS Indiana and Wyoming under implementation*

We are impacting Social Outcomes

Cardinality's Child Welfare solution is being used statewide in Maryland since 2020 and it has helped Caseworkers become more efficient and drive better outcomes for vulnerable children.

~70%
reduction in cases with **recurrence of maltreatment** for children

25%
decrease in removal of child from home per 1,000 children even though overall increase in # of cases reported

22%
reduction in re-entry in Foster Care system after reunification with family of origin

> "The greatest game changer for the Washington county community from CJAMS is the ability to modernize & mobilize my workforce to meet the needs of children and families."

Mike Piercy, Director, Washington County Department of Social Services

Proven Success

Over **10M citizens** are benefiting from Cardinality's modern solutions, with more to follow as we expand our footprint across multiple States and Agencies

MD-DHS | IN-DCS | MD-APS | MD-DJS | Arizona National Guard | WY-DFS

Save the Children | IN-FSSA | MD THINK | OR - OYA* | LSSI

No heavy customization
Our program-specific products, pre-built based on federal specifications.

No endless implementation
Thanks to modular tech and government focused platform design, agencies can modernize existing systems up to 50% faster than custom or unproven solutions.

No massive costs
Pre-built, funded by investors and SaaS model, cost sharing across multiple customers, resulting in lowest total maintenance costs.

Leverage AI & Technology to meet your policy goals, in months, not years

ROEING IT SOLUTIONS

IMPROVING THE LIVES OF VULNERABLE HOUSEHOLDS

EAPconnect Modules & Additional Features:

- Community Action Module & CSBG Reporting
- Weather Assistance Module
- Workflows & Configurable Rules
- Document Management
- PCI & 508 Compliant
- Role-based Security
- Azure Government Hosted

EAPconnect is now offered through NASPO ValuePoint in CA, CT, FL, GA, IL, LA, MO and VT.

EAPconnect is a comprehensive data management system designed to allow agencies to manage their Low Income Housing Energy Assistance Program.

The design of the system is to streamline the process with the EAP to allow the grantee to operate efficiently and refocus their efforts on connecting households with assisted energy resources. The results allow the grantee to provide transparency and fiscal responsibilities to all stakeholders and efficiently manage the LIHEAP program.

Online Intake – Households are able to apply online through a client portal. Ability to upload documents and copy prior year's application as a time saver.

Virtual Appointments – Meet with applicants and capture data in a virtual environment, and reap all the benefits of virtual appointments.

Fraud Checks – Identify possible fraud based on client demographic information as well as utility data.

Eligibility & Benefits – Rules-based determination of eligibility and automatic determination of benefit qualifications.

Vendor Portal – Vendors have the ability to see transmittals, participation status, and review, modify and correct claims.

Monitoring – Perform quality control as well as end-of-year audits of applications.

Data Validation – Configure the enforcement of required fields and business rules.

Dashboards & Reporting – Embedded dashboards and ad-hoc reporting within the system or use PowerBI to build your own.

Metrc Track and Trace Solution

e-tcc.com
317.638.0173
Mike.Boyle@e-tcc.com
1022 East 52nd Street
Indianapolis, IN 46205

WHAT IS METRC?

Metrc is the most trusted and experienced provider of cannabis regulatory systems in the United States. Our solution combines advanced software, radio-frequency identification, a dedicated customer-support team, and a secure database to track and trace cannabis from growth, harvest, and processing, to testing, shipment, and sale. Metrc serves more than 150,000 users, including growers, testing facilities, dispensaries, state regulators, and law enforcement officials across 15 states and the District of Columbia. We are proud to play a leading role in ensuring the safety and security of the nation's legal cannabis market.

HOW METRC WORKS

Cannabis legalization immediately tasks state governments with a host of challenging demands, including protecting public health, establishing new testing and tracking protocols, and securing the regulated market against illicit product. Metrc is a powerful ally in advancing all of these interests.

In states with regulated cannabis sales, cannabis businesses are required to account for all of their inventory at every stage of its development and production. Because Metrc's system tracks every legal product back to the original source plant, agencies are able to ensure no illicit cannabis enters the regulated market, and no cannabis products are diverted and sold unlawfully outside of it. Product destruction and disposal are similarly monitored to prevent diversion and unlawful sale. Metrc pioneered this precision track-and-trace system, providing a high level of detail and event history on every product sold.

SAFETY

Metrc protects public health.
Metrc's track-and-trace system allows regulators to quickly identify, isolate, and recall plants and packages that have been tested for contamination by laboratories and deemed unsafe. Metrc provided just this kind of support to states during the 2019 vaping crisis, helping prevent harmful products from reaching consumers.

"[Metrc's] system is widely considered one of the most advanced in the marijuana industry, and is used to track product, limit diversion, improve regulatory compliance, and discourage improper market behavior."

– John Hudak, Brookings Institution

TRANSPARENCY

Metrc expands regulator oversight.
We provide regulators with information on every cannabis product sold in the state, including growth, production, and transport details. It also eases the reporting burden, empowering agencies with up-to-the-minute information about market performance, sales growth, tax revenue, and enforcement.

THE METRC DIFFERENCE

Metrc works exclusively with state agencies, tailoring our systems to the demands of each state's regulatory environment. Metrc's success reflects investments in advanced technology and integrated software platforms that have been tried, tested, and perfected by Metrc engineers for more than two decades.

Metrc is more than a robust database. Our system uses advanced radio-frequency identification (RFID) tags to track plants, packages, and products as they progress through the supply chain, monitors their transport to retailers or manufacturers, and records thier authorized sale.

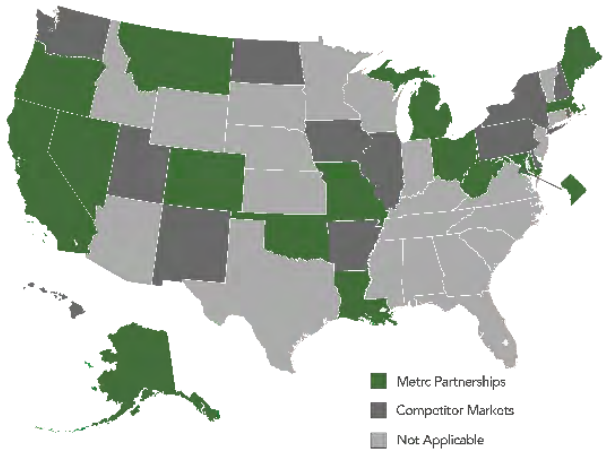

SECURITY

Metrc safeguards the marketplace.
Our system accounts for every plant and product sold, discouraging market diversion and inversion. We also protect against fraud by being the only track-and-trace provider to manufacture our own chip-embedded RFID tags, ensuring centralized, consistent, and counterfeit-proof production.

WHY METRC?

Metrc is the most trusted provider of cannabis regulatory systems in the United States because of superior technology and an adaptable system shaped by decades of experience in the field. Here are some of the things that set Metrc apart:

Track-and-Trace in the U.S.

$15 billion
in sales tracked

RELIABILITY

The most experienced track-and-trace provider in the nation.
Metrc designed the first track-and-trace system in close collaboration with state regulators in Colorado in 2011, and now provides track-and-trace solutions to 15 states and the District of Columbia—more than any other vendor. Metrc has never experienced a known security breach, has a record of 99.9% scheduled system uptime, and is the only track-and-trace vendor with a 100% contract renewal rate.

EXCLUSIVITY

A partner to state government.
Unlike other track-and-trace providers, Metrc does not offer ancillary consulting services or software solutions to businesses. Metrc's interests are solely aligned with the regulator and the public. Together with an extensive network of regulatory partners willing to lend perspective, Metrc's mission is to empower states to safeguard public health, safety, and trust.

FLEXIBILITY

Nimble in a constantly changing industry.
Metrc's system was designed to be responsive and adaptable. Changes to an evolving cannabis marketplace can be quickly incorporated into the software without costly change fees or down time. Metrc also features an open API, which gives businesses with different inventory and tracking systems the ability to easily offload key data sets. The same approach also allows state medical registries to validate patient limits at the point of sale.

15,000+
cannabis businesses served

SERVICE

A top-tier resource for customer support.
Metrc's solution provides unlimited support and training to industry and state users at no additional cost. Online and in-person courses help users successfully navigate the system and stay up-to-date with enhancements. Live, U.S.-based support is available 12 hours a day, Monday through Friday—with 24/7 management coverage to handle any breaking emergency. Metrc also provides extended service on weekends to keep all of Metrc's 150,000+ users proficient and compliant with state requirements.

150,000+
system users

AFFORDABILITY

Transparent, with highly competitive pricing.
Mindful of budget constraints faced by state governments and new agencies, Metrc offers a flexible and low-cost pricing structure. We bear the initial capital costs to develop, implement, and manage our system – meaning that the state is charged a low, flat fee. And our costs to the industry are kept affordable and proportionate to the size of the business – helping small businesses. There are no hidden charges, no expensive maintenance fees or one-time set-up costs, and no additional software or hardware required, other than a computer and internet.

Data Analytics

Inzata Analytics

e-tcc.com
317.638.0173
Mike.Boyle@e-tcc.com
1022 East 52nd Street
Indianapolis, IN 46205

TCC partners with Inzata Analytics to offer AI-powered, real-time, end-to-end data analysis solutions.

Inzata specializes in providing every tool needed for each step of the data analysis process, from ingesting raw, unrefined data, to building data warehouses & interactive dashboards *in less than one day.*

POWERFUL REAL-TIME ANALYTICS TO TRANSFORM YOUR BUSINESS

With terabytes of new data every day, most data warehouse systems take at least 24 hours to catch up. That means your reporting is always out-of-date from what's happening right now. Your business happens in real time, Inzata is the analytics platform designed to keep up.

Dashboards and reports tell you what happened, days, weeks, months ago. Inzata helps you focus on the now, and on what's next for your your business with speedy analytics, dynamic visualizations, and action- able intelligence.

Opportunity doesn't wait, neither should your data.

HIGHLIGHTS

- Stream, analyze, and get actionable insights on your data in real-time with automated data pipeline workflows
- Combine historical data with real-time streaming metrics for the most accurate decisions and forecasting
- Connect to over 800 data connector sources
- Instantly & automatically profile your unified data
- Design and share interactive dashboards with drill-down and ad-hoc capabilities

TCC

inzata®

WHY BUSINESSES CHOOSE INZATA'S SOFTWARE

Bring in data from hundreds of sources, combine streaming and historical data to detect trends, relationships, and hidden opportunities.

Your data's value is endless. Inzata gives its users the power to unlock that value in a matter of minutes by providing the tools necessary to ingest, unify, model, profile, and examine years of data collected from any size business.

Inzata simplifies big data for advanced analytics and real-time use cases that drive business innovation & growth.

STREAM & ANALYZE DATA, LIVE

Stream any data from **any source.** Analyze events while they're happening.

ANALYZE DATA FROM IoT DEVICES & GATEWAYS

Filter and process streams on-the-fly. Quickly help teams arrive at consensus, make confident decisions.

MAKE PRECISE DECISIONS

Guarantee accuracy with data-driven decisions. Decide and act with confidence.

AN ENTIRELY NEW DATA TECHNOLOGY DESIGNED TO DELIVER REAL-TIME INSIGHTS

HUMAN DRIVEN • MACHINE ASSISTED • GAME CHANGING

PEOPLEDOC BY ULTIMATE SOFTWARE'S HR SERVICE DELIVERY PLATFORM

EMPOWER HR TO PUT PEOPLE FIRST

At PeopleDoc by Ultimate Software, everything we do is focused on the belief that your employees should receive the same level of service as your best customers. And we know HR has the power to make this happen when they have the digital help they deserve.

Never before has HR had access to cutting-edge technology that transforms both HR operations and the employee experience. PeopleDoc has developed the only integrated HR Service Delivery platform that makes it easy for HR to help employees anytime, anywhere. While consumers have been enjoying useful digital experiences daily, HR hasn't had the power to provide these experiences to employees and their own teams. Until now.

Integrates with all HCM systems

Increase HR Agility and Productivity

PeopleDoc's HR Service Delivery platform makes it easy for HR to help employees, anytime anywhere, from a simple question to a complex event such as a maternity leave. Integrating with your HRIS, our software makes it easy for HR teams to automate almost any manual process, respond to employee requests, and actively manage all related employee documents - all within a platform built to mitigate security risks and reduce compliance headaches. See for the first time what your workforce really wants from you and how you can increase HR productivity.

- Provide employees with better service, faster
- Give your HR teams the best technology to get the job done, including the ability to save templated responses, to access employee files directly from within a case, and to automate manual work
- Eliminate manual, repetitive tasks for streamlined processes
- Quickly generate complex documents as part of a process or case
- Reduce the workload for your front line HR representatives by providing self-service options for employees
- Measure performance to quickly identify opportunities for improvement

Achieve Strategic Business Goals

- Proactively manage HR compliance
- Power your HR Shared Service Center
- Run and optimize your processes, including onboarding, internal transfers, and offboarding
- Align employees during a merger or acquisition
- Support every step of an employee's lifecycle

Whatever your HR operations model, an integrated HR Service Delivery platform gives you the power to support the digital workforce.

Improve the Employee Experience

- Provide a great experience for employees throughout various processes like crossboarding, relocation, promotions, tuition reimbursement, patent remuneration, and more
- Easily manage employee requests, whether the employee is remote, in a different geography, or without a desk and computer
- Enable transparency into processes and requests so employees can track their status
- Offer information on-demand and self-service options via the knowledge portal

people doc BY ULTIMATE SOFTWARE

#HRMatters

www.people-doc.com • contact@people-doc.com

How it Works

Help employees anytime, anywhere. Employees search the personalized knowledgebase for information on HR policies and processes. When they are ready to act, they can easily submit a request to HR that gets routed to the right person or team to manage it through the workflows in case management. The HR representative can automate a process based on that request or other business drivers, so it's easy for employees, managers, and HRBPs to complete the required tasks - and compliance is a breeze.

Any documents generated as a result of these processes or cases, or from other HR systems, automatically flow into an employee file, giving HR an easy, centralized way to access HR documents and comply with local regulations. View dashboards to quickly understand how you can improve your HR Service Delivery and the overall employee experience.

The PeopleDoc Platform

What Makes Us Different

PeopleDoc's unique approach gives our clients a competitive advantage. When you partner with us, there are some universal benefits – whether your company is 200 people or 200,000.

Adoption is critical to the success of any enterprise software. Our products are designed to be **user-friendly**. We make the experience as easy as possible for any user, from the employee searching for help, to the people manager approving a request, to the service center representative answering a complex employee question, to the HR leader looking for insights and analytics.

Our dedicated **focus on HR** means we both understand the unique needs of HR and have built the right solutions to support you. There is no competition for HR priorities in PeopleDoc's R&D budget or roadmap.

With experience helping global HR teams, we've also understood the massive business benefits you can drive by reducing risk in the countries you operate in. Our **compliance expertise and capabilities** enable you to proactively manage compliance in any country where you have employees, avoiding fines and mitigating risk.

PeopleDoc is a solution designed to **easily connect with your existing HR systems**. There is no need to re-enter data that already exists in another HR system, and no need for your IT team to build complex code that gets systems to communicate.

PeopleDoc by Ultimate Software

PeopleDoc by Ultimate Software is committed to putting people first. The PeopleDoc HR Service Delivery platform helps HR teams upgrade the employee experience, improve HR agility, and ease compliance management.

PeopleDoc's cloud solutions provide employee case management, knowledgebase, process automation, employee file management, and eVault capabilities. PeopleDoc is part of Ultimate Software, a leading global provider of cloud-based human capital management solutions serving thousands of customers worldwide.

Cloud Network Services

Cloudflare for Public Sector

e-tcc.com 317.638.0173 Mike.Boyle@e-tcc.com 1022 East 52nd Street Indianapolis, IN 46205

Cloudflare for Public Sector

Cloudflare offers governments and public health and educational institutions a global, highly resilient cloud network with built-in security and performance capabilities.

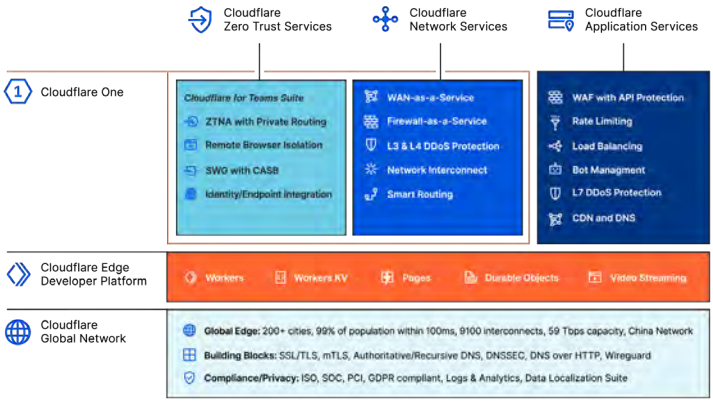

Government agencies, public schools and public health networks have seen a dramatic increase in traffic to their websites during the pandemic and an increase in cyber attacks. At the same time, many employees and contractors have had to work from home, putting a strain on the IT systems, presenting new security risks. The existing legacy infrastructure proved to be brittle and complex, so many agencies and public organizations turned to the Internet and the cloud, but required the security and reliability and the control of a private data center.

Cloudflare's solutions make the Internet more secure, faster and more reliable and can work with hybrid or multi-cloud environments. Our solutions solve complex networking and security challenges, but hide complexity from the end-users. Because they are easy to deploy and to manage, our solutions save time and have a low total cost of ownership. From one dashboard, our customers can customize and analyze the security and performance of their website and network. We have built security into every component of the network. Cloudflare's 59 Tbps network blocks an average of 57 billion threats per day, including some of the largest DDoS attacks ever recorded. Each and every login, request, and response that goes through our network strengthens the machine learning that we apply to detect and block threats at the edge, before they ever reach your organization.

Cloudflare has several public/private partnership initiatives:

1. Project Fair Shot provides Cloudflare's new Waiting Room service for free for any government, municipality, hospital, pharmacy, or other organization responsible for distributing COVID-19 vaccines.
2. The Athenian project, which provides free security and performance for state and local election websites.
3. Project Galileo, providing free security for organizations working in human rights, civil society, journalism, or democracy.

An Integrated, Global Cloud Edge Network

"There is only so much you can plan and test in terms of preparedness on the security side and after implementing Cloudflare and many other security precautions, we felt confident we had a security platform in place where we could adjust and respond to threats and high demand in real-time."

Stacey Mahaney, Chief Information Officer, Missouri Secretary of State

Why do public sector organizations choose Cloudflare?

Provide a secure online experience

Public sector end-users want online experiences that are fast and they can trust. Cloudflare's comprehensive security services provide in-depth protection, without impacting performance.

Mitigate DDoS Attacks

Public sector websites and networks can be attacked for a variety of reasons. Cloudflare's network can handle the largest DDoS attacks, and mitigates close to the attack source for faster response times.

Lower TCO and increase agility

Get operational agility with reduced capital expenditure. Replace on-premise hardware with network and security functions delivered and billed as a service.

Secure remote workforce

Provide secure access to internal applications for any user — regardless of device or location — with seamless authentication at the network edge.

Protect employees' Internet

Keep users and data safe from known and unknown threats on the Internet.

Protect network infrastructure

Stop attacks on on-premise infrastructure and hybrid cloud deployments, giving them consistent uptime and fast performance.

"With Cloudflare Waiting Room, we can see everything fill up over time, but it happens at a pace that's manageable. To be able to breathe a little bit and watch the numbers, watch the registrations happen, watch all the slots fill up, it's really great."

Tyler Penney

Web services administrator, County of San Luis Abispo

Why Cloudflare?

Network scale

Cloudflare sits in front of 25M+ internet properties, with points-of-presence in 200+ cities, in more than 100 countries. Every point-of-presence runs every Cloudflare service, which means we can mitigate attacks faster, without the need to backhaul traffic to a central location.

Shared Intelligence

All nodes in Cloudflare's network gather insights about the traffic patterns and share them with all the other nodes. This allows our products to make better decisions, whether it's our firewall, smart routing, bot management or DDoS mitigation.

Ease of use

In a world of limited resources, Cloudflare's integrated security stack and intuitive management interface make it easy to configure, deploy and maintain a defense-in-depth strategy.
We protect any environment, or configuration, from on premises, to cloud-based or hybrid.

Online Certifications

Everblue

e-tcc.com 317.638.0173 Mike.Boyle@e-tcc.com 1022 East 52nd Street Indianapolis, IN 46205

Online Certification is Now Certifiably Simple.

From custom test creation and hosting to branded online training and certification solutions, Everblue does all the work for you.

If you've looked into bringing your training materials online, you know how deep that rabbit hole is. From a branded website, to payment solutions, to content creation. And then there's secure hosting.

Everblue takes all the complexities out of getting this vital piece of your program up and running. Our experienced team does all the work, letting you focus on the big picture.

In the end, you'll have a custom, professional, branded solution hosted securely by a partner you can rely on.

Let us help you bring your training program online today.

We're Experts in Every Aspect of Online Training.

Because you have more things to worry about than learning HTML and figuring out payment portals.

- ✓ Certification Scheme & Test Development
- ✓ Marketing Website & Payment
- ✓ Training Delivery (Learning Management System)
- ✓ Exam Delivery
- ✓ Identity Verification
- ✓ Content Security (Lockdown)
- ✓ Proctored Integrity
- ✓ Certificate Management

Online Test Delivery

Everblue will help you design, develop, and deliver professional testing exams. Our psychometricians will ensure the validity of your test questions.

Exam Proctoring

We'll help you increase the security of your online assessments, at scale. Our industry-leading technology lets you proctor your exams worldwide.

LMS Hosting

We have experience working with a wide range of Learning Management Systems (LMS) and Test Delivery Engines (TDE), including Canvas, Blackboard, Moodle, and more.

Instructional Design

We'll measure and assess knowledge from scratch or work with existing material to package professional, secure online assessments, e-learning, and other educational content.

GrantPro

Create Efficiencies with a Streamlined Financial Aid Experience

GrantPro – a full-service, web-based financial aid management system – allows agencies and postsecondary institutions to easily award, pay, and manage diverse grant, scholarship, and loan program funds.

20+
YEARS OF SERVICE

4
PORTALS

Benefits of Using GrantPro

We deliver unique features to help you manage multiple types of financial aid programs and connect you with schools, students, high schools, and other agencies, streamlining the financial aid process. By bringing these groups together on a single, web-based system, GrantPro makes it easy to adjust award criteria and plan for the accurate allocation of funds – while offering other unique benefits.

- **User-Friendly Student Portal.** Managing financial aid is a complex and challenging task on top of everything else students have to juggle. GrantPro makes it as simple as we can with an easy-to-use, mobile-friendly student portal.
- **Innovative, Secure Technology.** Nelnet understands the importance of data security. GrantPro is offered in a NIST-compliant hosted environment which can be hosted in-house or at your choice of service provider. GrantPro's flexible design allows us to quickly meet the changing needs of your financial aid programs.
- **Personal Touch.** With over 20 years of experience in financial aid management, our team works closely with you to design and implement a solution to meet your needs. Even after implementation and data conversion, we provide ongoing system maintenance and support for all financial aid programs on GrantPro.

Why Nelnet GrantPro?

Nelnet specializes in financial aid technology and business solutions for agencies and organizations that serve students, educational institutions, and state and federal agencies. You, your students, and others in your network benefit from GrantPro having that expertise.

GrantPro's User-Friendly Portals Connect All Groups

Agency Portal

In addition to interfacing with state accounting and disbursement systems, student records, and state and external agencies, GrantPro's agency portal offers these unique features (and more).

- Dashboard of "To Do" items
- Application entry
- Document management
- Automated daily download of ISIR files
- Flexible adjustment of eligibility rules and funding levels

Student Portal

- Individual account creation
- Online application workflow
- Aggregated view of all programs, status and awards
- Institution transfers and student information updates
- Accept/decline awards
- Branded to integrate with your existing web presence

School Financial Aid Officer Portal

- Dashboard of "To Do" items
- Certification of student eligibility – online and file upload
- Request reimbursements
- Payment processing
- Flexible updates of institution information
- Electronic reports and forms

High School Counselor Portal

- FAFSA completion data
- Flexible updates of high school information
- View and update ACT/SAT data

VIRTUAL DESKTOP INFRASTRUCTURE VDI

Virtual Desktop Infrastructure (VDI) is the act of securely connecting to IT services, applications or data from nearly any device and from any location. This connection allows users to work productively, efficiently and collaborate remotely via any worldwide network connection.

Our VDI includes built-in backup and built-in disaster recovery with fully redundant hardware and dual active sites.

Secure remote access benefits include:

VDI Hosting Infrastructure

VDI is great for teleworkers, contractors, those who work from home, or individuals displaced from their home office. It is valuable for businesses **to have a strategy for allowing remote access to their users**. Employees may have the flexibility to work from home, or have a plan in place if they are not able to go into the office during a natural disaster.

VDI is the best-of-class, work from anywhere solution.

TCC Cloud and Managed Solutions

TCC's managed solutions and proven methodologies in Infrastructure Managed Services ensure optimal system performance and secure applications for your organization.

Amazon Web Services

TCC is a registered partner with Amazon Web Services pursuing AWS Partner Consultant status. TCC currently has competencies in Disaster Recovery, Migration, Managed Infrastructure Services, and Enterprise IT for Midrange platforms while trending towards Software as a Service within the AWS Cloud. TCC has a footprint within the AWS GovCloud that offers the highest security standards including and not limited to FISA, FedRAMP, and ITAR regulations. TCC actively manages projects through onboarding, migrations, post migration support, and continuing business development utilizing AWS.

Microsoft Azure

Microsoft Gold App. Development
Microsoft Gold Hosting
Microsoft Silver Datacenter

Maintaining a Certified Microsoft Partnership contributes to our awareness of enhancements to web based application development and database technologies. Our focus is to develop and maintain a system that is efficient and user friendly, utilizing current industry techniques. Our certified partnership allows us to be aware of advanced solutions and any improvements available for the current system.

TCC is also a Microsoft Gold Certified Partner for Application Development and Hosting, and Microsoft Silver Certified for our Datacenter.

Lifeline Data Center

TCC's partner of eight years, Lifeline Data Centers, has helped companies improve uptime and control data center facility operating expense. TCC serves as LLDC's sole managed services provider and routinely works hand in hand to support LLDC customers as well as TCC's clients. LLDC successfully completes regular SSAE16 Type II audits that map to SysTrust, NIST 800-53 Rev4 (High), IRS Pub 1075, and others. These processes and operational maturity result in no unscheduled outages since becoming operational. With 100% uptime, Lifeline is an innovator in colocation, continually finding ways to reduce downtime risks while reducing costs. Lifeline provides secure hardened data center buildings, highly reliable power and cooling, and access to many telecommunications providers. Lifeline provides a redundant array of UPS's, redundant array of Generators, redundant array of Chiller Plants, and the most direct power path. LLDC serves hundreds of companies in health care, software, utilities, pharma, cloud computing, and government. It is one of the few commercial FISMA and FedRAMP fast track pre-ready sites in the nation and is expected to be the first commercial EMP secured data center in the country.

Lifeline Data Centers are experts at solving SSAE 16, TIA-942, NFPA, HIPAA, FISMA, FDA, PCI/DSS and identifying potential Sarbanes-Oxley audit issues. Lifeline delivers multi-level compliance solutions in audit-ready data centers with in-house expertise.

Find the Right Solution with TCC

An effective managed services model is designed to share the vision of an organization's objectives and goals. At TCC, we scale to your business size, understand your needs, and works closely with you to define and assess operational goals and develop a plan for how best to achieve them.

IDENTIFY **TRANSFORM** **MANAGE** **OPTIMIZE**

Our proven methodologies in cloud infrastructure ensure seamless transition, maximum performance and continuous optimization.

Implementation Services - Installing and configuring hardware and back-office software

- Virtual and physical infrastructure including, firewalls, routers, switches, tape drives and backup media, anti-virus software, imaging system hardware and software, and the suite of Microsoft Windows Server and SQL Server products
- Mainframe processors and peripherals, systems level and third party software, both physical and virtual Local Area Networks (LANs), application configuration management and security access (RACF/Top Secret)
- Domain name administration including ordering and maintenance of domain names and zone files, configuration of hostnames and URLs, and SSL certificate services

Maintenance Processes - Providing essential maintenance tasks

- Backup monitoring, virtual and physical tape exchanges and periodic test restores, antivirus monitoring and update maintenance, event log monitoring for Windows servers, regularly updated security patches, website and data base availability monitoring
- Break/fix and support work as needed

Security Practices

- Actively driven Information System Security initiatives for business areas of government
- Building and maintaining secured hosted environments, developing secure software applications, and performing Disaster Recovery services
- Multi-layered approach to security and services
- Reliable tools applied with best practices to minimize security risk
- Segmented network design and deployment of the “principle of least privilege” access model; isolating information areas from one another
- Support customers through audit and review processes
- Proven processes for anti-virus updates, installation of software patches, data backups, disaster relief preparation, monitoring of uptime and performance, software license administration, lifecycle management and documentation of these procedures

About TCC

TCC was founded in 1996 in Indianapolis to provide technology consulting services to businesses and government agencies in Central Indiana. After nearly a quarter of a century with a team of more than 200 professionals, we serve clients nationwide. Our innovative solutions deliver real-world results and have made us a leading provider in Cloud computing, Network Operations, Managed Services for cloud, network, mid-range and mainframe platforms and Child Care Software Solutions.

TCC developed its expertise in IT infrastructure hosting with the development, design, and implementation of enterprise wide networks in the government’s Health and Human services sector. TCC continues to invest and evolve our people, processes and technology within our core services.

While TCC is a fast-growing company, we still manage to maintain a small-shop mentality. We are committed to every project and take pride in doing what’s right for our customers. By listening to our clients and understanding their needs, we are able to deliver innovative solutions that help solve critical business challenges. When you work with TCC, you can count on a quick response from professionals you trust.

MAINFRAME-AS-A-SERVICE

BlueHill DATA SERVICES

Since 1994, our goal is simple:

Provide our customers an equivalent or better mainframe process environment at a reduced cost by leveraging our software, staff, and facilities on the customers' behalf.

TCC partners with Blue Hill Data Services to offer Mainframe-as-a-Service through NASPO ValuePoint Cloud Solutions.

Blue Hill specializes in providing IBM Mainframe 24/365 service delivery and support, to Corporations, Higher Education and Governments.

Highlights - Customer Focus:

- 100% On-Shore USA Services
- Support all operating system levels: z/OS, OS/390, VM/VSE
- Stay on your current release, if desired
- Full support of IBM and ISV software stacks
- Proven migration methodology
- Dedicated LPARs with the required MIPS/MSUs to meet your on-line and batch SLAs
- Highly skilled and experienced Technical Team, including Systems Programmers, Production Control/Job Schedulers, Operations, and Service Desk
- 100% Customer Success for Migrations and ongoing Steady State Support

Why Customers Select Our Services

Cost Efficient

- Reduce costs - 15-25% reduction on average with move from CapEx to OpEx
- "Pay-for-what-you-use" Elastic Model: Move applications off MF, reduce costs
- Saving time and money by not being forced to upgrade HW/SW

Retiring Workforce

- Provide continuous support to run customers' mission critical business systems

Mitigate Risk

- Customer's data center not robust or secure enough
- Meet regulatory and compliance requirements
- We will not force you to change the way you are used to operating

HW/SW Upgrades

- We maintain and support older legacy HW/SW, current HW/SW, as well as upgrades to currency

Current Sourcing Relationship Problems

- Not satisfied with current service levels, technical expertise, and/or poor responsiveness

Flexibility to Support "As Is"

- Will not force customers to upgrade, convert, or change the way they operate - Less Risk!
- Not an "all or nothing" service - Select only those services required

TCC

MAINFRAME-AS-A-SERVICE

BlueHill DATA SERVICES

Service Delivery Options:

- Remote support for customers who choose to retain their hardware on their premise
- Fully Managed Mainframe Outsourcing, or select only those services required
- We will introduce improvements (i.e., automation, upgrades) upon our customers' approval and timeframes

"We provide customized solutions supported by a standardized framework."

Flexibility	▪ Do not force customers to upgrade software OS levels; run "as is"; positive affect on hardware and other software ▪ Customers select support services as required
Clear Cost Benefits	▪ Lean and agile, not bloated executive level ▪ Cost-effective pricing models; price competitve ▪ Easy to understand Total Cost of Ownership (TCO) ▪ Eliminate CapEx, Reduce OpEx
Scalable Solutions	▪ Scalable architecture, responsiveness to demanding business changes ▪ Superior, predictable and secure solutions ▪ Pay-as-you-go model; flexibility to scale up or down as requirements change
Operational Excellence	▪ 30+ years of experience managing complex customer environments ▪ Improved service delivery; meet or exceed existing SLAs ▪ Dedicated account management for 100% customer satisfaction
Core Business	▪ Blue Hill is focused on ITO as a core business ▪ Customer advocacy ▪ "Customer First" is critical to our success

TCC partners with DSM to offer fully managed data assurance solutions

DSM redefines our client's business outcomes from their IT infrastructure ensuring that their data is protected and available when and where they need it, saving time and money.

DSM Canopy- Managed IT Services

We run your IT. You run your business.

Delegate your operational and support duties to DSM, and we'll keep your infrastructure up-to-date and at peak performance. Choose the level of service that fits your needs. With our monthly flat rate, there are no surprises.

Benefits of DSM Canopy:

- You receive support from our top-notch team of talented IT professionals.
- You can provide better service at lower cost.
- Your infrastructure is supported, whether it's on your premises or in the Cloud.
- You share a virtual CIO who assists in planning and helps you stay current with technologies and trends.
- You can see the measured improvements of our focused efforts to improve your IT business health.
- Multi-factor authentication (MFA) support for core business services included.

24x7x365 monitoring

Ensure the availability of your core business applications. Comprehensive visibility into your infrastructure no matter if on-premises or in the cloud. We intercept problems before they cause disruptions.

Virtual CIO (vCIO)

- A dedicated vCIO becomes part of your team
- The vCIO makes planning and investment recommendations to guide your business IT needs

On-site support

DSM includes:

- Monitoring the environmental conditions in your server room
- Maintenance of printers, desktop or laptop computers

DSM Canopy will reduce your overall IT cost structure and free up resources to provide better service levels for internal clients.

TCC partners with DSM to offer fully managed data assurance solutions

DSM redefines our client's business outcomes from their IT infrastructure ensuring that their data is protected and available when and where they need it, saving time and money.

DSM Colocation

Your hardware. Our data centers. Real value.

Utilize DSM's Colocation services, and you can house your IT hardware in a world class data center without having to build one and hire a staff to run it. Our team of experienced engineers manage the physical environment for you, ensuring security, compliance, and uptime— all at an economical price.

24x7 support

- Our network of data centers were designed to ensure your critical business systems are always powered
- on and connected.
- Our on-site professional staff gives you 24x7x365 peace of mind that your critical infrastructure is safe, sound,
- and online when you need it.

Facilities designed to keep your systems running

- Our buildings are inland, above sea level, outside flood zones and wind-borne debris zones
- Uninterruptable Power Systems keep your systems powered on
- Highly redundant network connectivity keeps you linked to the world
- Multiple layers of high-level security
- SSAE16, SOC 1, SOC 2, HIPAA, and CJIS compliant

Full data center support at the right price

- Choose from our menu of customizable data center suites
- "Smart Hands" support services: we'll be your eyes, ears, and hands
- Access to the full suite of DSM ancillary services, including bandwidth, disaster recovery, backups and data replication

TCC partners with DSM to offer fully managed data assurance solutions

DSM redefines our client's business outcomes from their IT infrastructure ensuring that their data is protected and available when and where they need it, saving time and money.

DSM Data Protection as a Service (DPaaS)

Full protection and fast access to your critical data.

DSM Data Protection as a Service provides backup and restore capabilities of your data that are crucial to your business stability. DSM protects your data wherever you store it: on-site, off-site, in the private or public cloud and even multi-cloud environments. For systems of all sizes, DSM ensures ready, reliable access to your essential data.

You're protected when:

- Compliance requirements mandate long term backup retention.
- You need to restore a single database on a database server.
- You need to restore a file from a number of days, weeks, or months ago.
- You accidentally delete data from a server.
- Anytime data is lost or compromised.

Customized protection, the features you need

DSM's data protection software features a breadth of capabilities to protect any system, from simple to enterprise. Data protection methods available include backup, archiving, snapshots and replication. The solution can also protect all your Microsoft applications from SharePoint and Exchange to Office 365 and OneDrive for Business whether those services are hosted locally or in the cloud. DSM manages the backup infrastructure, and provides your company access through an easy to use self-service portal.

Assistance from start to finish

DSM will evaluate your system and data, propose an optimal solution for your needs and budget, then help implement it. For our Managed Services clients, we will also manage your Data Protection, freeing you to focus on your business.

Confidence in your data

Our fast, reliable tests of your recovery capabilities—which can be conducted by us or by you—help ensure that critical data is recoverable before you need it.

DSM Disaster Recovery as a Service

e-tcc.com
317.638.0173
Mike.Boyle@e-tcc.com
1022 East 52nd Street
Indianapolis, IN 46205

TCC partners with DSM to offer fully managed data assurance solutions

DSM redefines our client's business outcomes from their IT infrastructure ensuring that their data is protected and available when and where they need it, saving time and money.

DSM Disaster Recovery as a Service (DRaaS)

Face the worst, then get back to work.

Trust your data to DSM's Disaster Recovery services and we'll ensure it survives hurricanes, floods, power outages, hard drive failures, malware attacks, and other serious disruptions. Under our managed cloud recovery system, we replicate your data around the clock so that when disaster strikes, your team can pick up right where they left off.

Why trust DSM?

- Our data network is trusted by even the most secure state agencies.
- Our servers are compartmentalized in our data center for greater security.
- We utilize leading technology providers such as Zerto and IBM Mainframe.
- We have three decades of experience protecting data in high-risk weather.

Solutions for your needs

DSM's Disaster Recovery solutions can satisfy even the most aggressive recovery time objectives (RTO) and recovery point objectives (RPO). They provide flexible journaling retention to allow for multiple recovery points. We can help with almost any need, location, or compliance requirement (including SAS70 Type II, HIPAA, and CJIS). Ability to leverage Azure as a recovery site when it makes sense for your business.

Cost effectiveness at any budget

Take advantage of our flexible services to use only what you need, rather than maintaining costly legacy applications. New technologies — and DSM's proven methodology — is now a cost-effective enterprise solution to fit all budgets.

Complete protection

- We'll evaluate your systems and data to determine how fast you must recover.
- We'll help you create an action plan. We'll help you implement it.
- Finally, we'll assist in managing, testing and updating your disaster recovery plans yearly free of charge.

DSM Virtual Private Cloud

e-tcc.com
317.638.0173
Mike.Boyle@e-tcc.com
1022 East 52nd Street
Indianapolis, IN 46205

TCC partners with DSM to offer fully managed data assurance solutions

DSM redefines our client's business outcomes from their IT infrastructure ensuring that their data is protected and available when and where they need it, saving time and money.

DSM Virtual Private Cloud

Flexible, agile IT infrastructure at a predictable price.

DSM's Virtual Private Cloud enables you to run your critical business applications in an isolated, industry-leading enterprise infrastructure, without the extensive investments of building or maintaining your own. Our multi-tenant cloud offers flexible resource allocation models to help you get the most for your money.

The most flexible and cost-effective option for cloud services.

- Your systems run on a shared enterprise infrastructure DSM owns and operates.
- No costly capital investments: no buying, building, operating, or maintaining your own infrastructure.
- Our flexible CPU, memory and storage tiers enable you to fine-tune our service to your exacting needs.
- Hypervisor choice leveraging both VMware and KVM.
- Self-Service access to VMware and KVM resources, including guest console access.
- REST API access to automate and manage cloud workloads.
- 24x7x365 access to DSM's team of technical experts.

Full OS-level control

DSM manages the virtualization layer. You have full control of the OS, down to resource provisioning.

Meet nearly any compliance standard

Our Virtual Private Cloud meets CJIS, HIPAA, PCI, and SSAE16 SOC 1 Type II standards. We're trusted by some of the largest public agencies and commercial enterprises in the country.

Simplify your budget

Eliminate capital expenditures in exchange for a predictable monthly OPEX payment.

Minimize risks DSM guarantees 99.99% uptime.
